

## When you need to know....

Efficiency is one of the most important factors in business success. This applies even more forcefully when dealing with uncertain times. Helping your organization understand where to cut - and where to spend - is the real goal of a product like Angkor. Providing the information you need to analyze the relative value of Notes/Domino applications, Angkor gives you much greater control over your investment.

A Notes/Domino environment can be dauntingly complex – enough to give pause to attempts at meaningful change. Many companies have extensive implementations, largely driven by user demand. Rarely has strategic planning been the most important factor in the process, but as long as the applications served their purpose there was little point in pursuing the issue. When it comes time to make decisions however, do you have all the facts? How would you know, for sure?

Atlantic Decisions will help you collect and analyze all the relevant data from your Notes/Domino environment, and provide a framework for effective action to minimize costs, increase returns, and "tune" your systems for maximum productivity. These same data can be used to analyze strategic proposals (migrations, new applications, etc.) within your business model. The combination of our unique tools and our practical experience will provide reliable, apolitical answers to any questions you have about Domino/Notes within your organization.

The Angkor tool can be customized to fit your needs and goals, as can our services. Once the tool is installed and properly customized, we can assist your own Notes staff as much or little as you need to insure the success of the project. On an ongoing basis, Atlantic Decisions can assist in realizing your project goals through in-depth analysis or specific situations, custom development, training, and more. We are committed to helping you reach your goals.

Contact Atlantic Decisions today to get a handle on the true value of your Domino applications – at any level you require.
